Electric furnace, heating chamber with electricity as the heat source for achieving very high temperatures to melt and alloy metals and refractories. The electricity. An electric furnace may also be any of the following type of heat producing equipment using electric power: A central heating plant for a home or building. An electric arc furnace used for steel making and smelting of certain ores. An industrial heat treating furnace. An electrically heated kiln. An electric arc furnace (EAF) is a furnace that heats charged material by means of an electric arc. Industrial arc furnaces range in size from small units of approximately one ton capacity (used in foundries for producing cast iron products) up to about ton units used for secondary steelmaking. Construction - Operation - Other electric arc furnaces - Plasma arc furnace. An electric furnace is similar to a conventional gas forced-air furnace except that it produces heat with electric heating elements instead of gas burners. Circuit breakers that control the heating elements may be either inside or outside the cabinet. An electric-resistance furnace works like a big hair dryer. THE ELECTRIC FURNACE. Jas. Lewis Howe. J.
