The Bounce. As the name suggests, one method of trading support and resistance levels is right after the bounce. Many retail forex traders make the error of setting their orders directly on support and resistance levels and then just waiting to for their trade to materialize. Support and resistance is one of the most widely used concepts in forex trading. Strangely enough, everyone seems to have their own idea on how you should. The basic trading method for using support and resistance is to buy near support in uptrends, ranges, or chart patterns, and to sell/short-sell near resistance in downtrends, ranges, and chart patterns. It helps to isolate a longer-term trend, even when trading a range or chart pattern. In the chart below, we see an example of support and resistance levels containing price within a trading range. A trading range is simply an area of price contained between parallel support and resistance levels like we see below (price oscillates between the support and resistance levels in a trading range). I am going to guide you every step of the way how to trade support and resistance in forex, how to trade support and resistance in stocks, and.
